About Me

Results-oriented undergraduate pursuing a BSc in Industrial Statistics and Mathematical Finance, aspiring to become a Data Analyst & Business Analyst. Possess strong analytical and problem-solving skills with a solid foundation in statistics and data analysis. Experienced in data cleaning, analysis, and visualization using tools such as Excel, Python, SQL, Spss and Power BI. Skilled at transforming raw data into meaningful insights that support data-driven decision-making. Highly motivated, adaptable to new technologies, and able to work effectively both independently and within teams.

Soft Skills

- Analytical Thinking
- Problem-Solving and Critical Thinking
- Time Management and Deadline Handling
- Adaptability and Fast Learning
- Data Handling
- Teamwork and Collaboration
- Decision-Making Skills

Education

- **Bachelor of Science in Industrial Statistics and Mathematical Finance** 2023 - Present
University of Colombo
This degree provides a strong foundation in statistics, financial mathematics, and Computer Science, with a focus on data analysis and quantitative problem-solving. The coursework includes Statistics, Financial Mathematics, Computer Science, Statistical Data Analysis, Data Visualization, Database Systems, and Probability Theory, which develop skills in analyzing data, interpreting statistical results, and applying analytical techniques to support data-driven decision-making.
- **G.C.E. Advanced Level** 2021
Prince College - Ratnapura
Combined Mathematics - B Physics - B Chemistry - C

Professional Certifications

- Python for Beginners - University of Moratuwa
- Python Programming - University of Moratuwa
- Foundations of Project Management - University of Moratuwa
- Statistics & Excel - Udemy
- Power BI Fundamentals - Coursera
- Introduction to R Programming for Data Science - IBM
- Investment Risk Management - Coursera

Experience

- **Freelance Data Analyst** 2024-Present
 - Performed data cleaning, analysis, and visualization for academic and research datasets.
 - Conducted statistical analysis and prepared reports to support research decision-making.
- **Internship Trainee — People's Bank** 2022-2023
Kiriella People's Bank Branch
 - Assisted in daily banking operations, record management, and customer service activities.
 - Developed problem-solving, teamwork, financial processes, and communication skills in a professional environment.
- **Service learning — Union Bank**
 - Contributed to calculating Scope 1 and Scope 2 carbon emissions by entering and validating electricity and generator fuel data.
 - Assisted in preparing datasets to estimate CO₂e emissions across the Head Office and 61 branches following GHG Protocol and IPCC standards.
 - Supported data preparation for statistical analysis and sustainability analysis to identify energy usage patterns and emission hotspots.
- **Service learning — Ceylon Chamber of Commerce**
Climate Finance Analysis
 - Researched gaps in mobilizing climate finance in Sri Lanka by analyzing infrastructure projects and evaluating governance, institutional, and implementation challenges affecting international funding utilization.

Technical Skills

- Data Cleaning
- Data Transformation
- Data Visualization & Business Intelligence
- Exploratory Data Analysis (EDA)
- Statistical Analysis
- Time series analysis

Tools

- MS Power BI
- MS Excel, MS Word, MS PowerPoint
- Python (Pandas, NumPy)
- SQL
- R Programming
- SPSS
- Minitab
- EViews

VOLUNTEERING EXPERIENCE

Member - Leo club
Faculty of Science, University of Colombo

- Participated in community service and social initiatives organized by the club.
- Supported volunteer programs and events promoting leadership and teamwork

Projects

Carbon Emissions & Sustainability Analysis – Union Bank PLC *Service Learning Project | University of Colombo*

- Conducted analysis of Scope 1 and Scope 2 carbon emissions using 2024–2025 data, performing data cleaning, preprocessing, and statistical analysis to quantify carbon footprint and identify key emission sources.
- Applied trend analysis, hotspot (Pareto) analysis, and time series forecasting (Exponential Smoothing) to evaluate electricity consumption patterns and predict increasing emission trends up to 2026.
- Developed scenario analysis models and sustainability recommendations, identifying electricity as the major contributor and proposing effective strategies such as energy efficiency, refrigerant management, and fuel optimization.

Employee Retention Analysis Dashboard

- Created a Power BI interactive dashboard to visualize attrition trends, workforce distribution, and employee risk levels.
- Designed a Flight Risk Score to identify employees at high risk of leaving the organization.
- Analyzed key factors influencing attrition including overtime, job satisfaction, income level, and years at company.
- Analyzed key factors influencing employee attrition such as overtime, job satisfaction, income level, and years at company, achieving 72% recall in predicting employees likely to leave and supporting proactive HR retention strategies.

Data Analysis on Social Life Campus Integration Among Second Year Undergraduates *Faculty of Science Research Project*

- Conducted a statistical analysis to examine factors influencing campus integration among second-year undergraduates using survey data from approximately 60 students.
- Developed a Campus Integration Score using multiple Likert-scale indicators measuring belonging, peer interaction, and academic support; tested reliability using Cronbach's Alpha.
- Applied statistical techniques including descriptive statistics, One-way ANOVA, Kruskal–Wallis test, and post-hoc Dunn's test to evaluate relationships between student activities and integration levels.
- Identified that event participation significantly influenced campus integration, while demographic factors and club participation showed no significant association.

Employee Performance & Attrition Dashboard *Power BI Data Visualization Project*

- Developed an interactive Power BI dashboard to analyze employee performance, salary trends, overtime, training hours, and attrition risk across departments.
- Performed data preparation and modeling using Excel datasets and created relationships between tables to support analytical insights.
- Designed DAX measures and KPIs to evaluate key metrics such as average performance rating, monthly salary, and department-level attrition risk.
- Built interactive visualizations to examine performance by department, overtime patterns, and relationships between projects handled, age, and performance.
